Chest Pain John Albarran,Jenny Tagney,2008-04-15 Chest Pain: Advanced Assessment and Management promotes a systematic approach to the assessment and management of patients presenting with chest pain and related undifferentiated symptoms. Specifically, it equips practitioners with the knowledge and clinical skills needed to effectively differentiate and respond to clinical presentations where the primary symptom for seeking healthcare advice involves chest pain. Introductory chapters in section one explore the principles of physical assessment, history taking and differential diagnosis to provide the framework for subsequent chapters, which explore cardiac and non-cardiac causes of chest pain. Section two examines the advanced assessment and overall management of patients with pain in the chest. A range of clinical conditions that trigger chest pain and other related symptoms are covered, including: angina, acute coronary syndromes, pericarditis and myocarditis, aortic dissection, pulmonary embolism, oesophago-gastric disorders, musculoskeletal causes, pulmonary and respiratory causes, coronary heart disease, myocardial infarction, chest pain caused by trauma or cardiac syndrome X, cocaine misuse and Herpes zoster.

Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Diseases of the Chest, Breast, Heart and Vessels 2019-2022 Juerg Hodler, Rahel A. Kubik-Huch, Gustav K. von Schulthess, 2019-02-19 This open access book focuses on diagnostic and interventional imaging of the chest, breast, heart, and vessels. It consists of a remarkable collection of contributions authored by internationally respected experts, featuring the most recent diagnostic developments and technological advances with a highly didactical approach. The chapters are disease-oriented and cover all the relevant imaging modalities, including standard radiography, CT, nuclear medicine with PET, ultrasound and magnetic resonance imaging, as well as imaging-guided interventions. As such, it presents a comprehensive review of current knowledge on imaging of the heart and chest, as well as thoracic interventions and a

selection of hot topics. The book is intended for radiologists, however, it is also of interest to clinicians in oncology, cardiology, and pulmonology.

Pain Imaging Maria Assunta Cova, Fulvio Stacul, 2019-03-06 This book addresses all pain imaging aspects related to both the central nervous system and the body (thorax, abdomen and pelvis), thus updating the international literature on the topic. By adopting a clinical-radiological approach and offering a comprehensive differential diagnosis for a number of painful syndromes (many of which can mimic one other), the work aims to support and enhance the diagnostic management of these patients, suggesting the most appropriate diagnostic algorithm. The book is divided into separate sections for each anatomical macro-area, and the chapters cover the respective topics from both clinical and radiological perspectives. Further, the book includes extensive electronic supplementary material. As such, it offers an invaluable tool for radiologists, neuroradiologists and clinicians working in internal medicine, surgery and neurology, and could also be used in residency programs for these groups.
