Social Finance Neil Shenai,2018-09-19 How do market participants construct stable markets? Why do crises that seem inevitable after-the-fact routinely take market participants by surprise? What forces trigger financial panics, and why does uncertainty lead to market volatility? How do economic elites respond to financial distress, and why are some regulatory interventions more effective than others? *Social Finance: Shadow Banking during the Global Financial Crisis* answers these questions by presenting a new, economic conventions-based model of financial crises. This model emerges from a theoretical synthesis of several intellectual traditions, including Keynesian epistemology, Hyman Minsky's asset market theory, economic sociology, and international relations theory. *Social Finance* uses this new paradigm to explain instability in the global shadow banking system during the global financial crisis. And it presents the results of interviews with some of the world's leading investors - who saw over \$2 trillion in annual order flows and managed over \$160 billion in assets - to provide first-hand accounts of markets in crisis. Written in accessible prose, *Social Finance* will appeal to a broad audience of academics, policymakers, and practitioners interested in understanding the drivers of financial stability in the twenty-first century.

E-Participation in Smart Cities: Technologies and Models of Governance for Citizen Engagement Manuel Pedro Rodríguez Bolívar,Laura Alcaide Muñoz,2018-08-01 This book analyzes e-participation in smart cities. In recent decades, information and communication technologies (ICT) have played a key role in the democratic political and governance process by allowing easier interaction between governments and citizens, and the increased ability of citizens to participate in the production chain of public services. E-participation plays an important role in the development of smart cities and smart communities , but it has not yet been extensively studied. This book fills that gap by combining empirical and theoretical research to analyze actual practices of citizen involvement in smart cities and build a solid framework for successful e-participation in smart cities. The book is divided into three parts. Part I discusses smart technologies and their role in improving e-participation in smart cities. Part II deals with models of e-participation in smart cities and the organization issues affecting the implementation of e-participation; these chapters analyze the efficiency of governance models in relation to the establishment of smart cities. Part III proposes incentives to motivate increased participation by governments and citizenry within the smart cities context. Written by an international panel of experts and practitioners, this book will be a convenient source of information on e-participation in smart cities and will be valuable to academics, researchers, policy-makers, public managers, citizens, international organizations and anyone who has a stake in enhancing citizen engagement in smart cities.

International Encyclopedia of Transportation ,2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. *Encyclopedia of Transportation, Seven Volume Set* - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to

problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications
